Talking With Apocalypse about Your Project

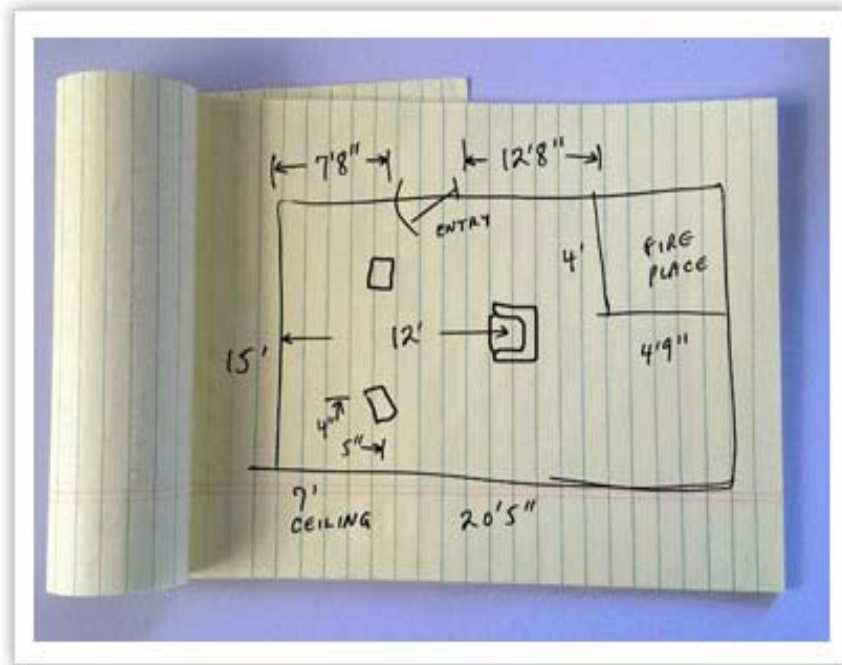

We've designed and treated rooms for 15 years all over South India and Asia Pacific and have learned there are only a few key things we need in order to begin the assessment of your room or space or auditorium acoustics.

It's not necessary for us to physically be in your room to see what we're dealing with. If you can adequately describe your room or space or auditorium and the problems you are facing or you are trying to solve, we can help. Please gather the following, to help us help you.

1 Floorplan

Draw it on a paper or napkin and take a click or snapshot with your cell if you want... Just keep it simple!

This is really just about the dimensions and shape of the room, and nothing more. If you have something fancy like blue-prints or a CAD drawing, by all means send it, but it's probably exertion.

Remember to include:

- height dimension (In Feet or Meter)
- Width and Length Dimensions (In Feet or Meter)
- intended listening position
- intended speaker position
- Wall Finishes.
- Flooring Finishes.
- Ceiling Finishes.
- Windows and Doors, If Any.
- Any Reflections, If Yes-What Type?
- Any Echo, If Yes-What Type?
- Any Other Inputs

Early	Late	Repeated	Delay	
Flutter		Flat	Noisy	Combined

APOCALYPSE ACOUSTIC SCIENCES CORP

2 Photos

Take overlapping photos of the entire room, for a 360° view.

Vertical shots are better than horizontal, so we can see where the walls meet the ceiling.

- Stand back as far as possible from each wall
- Shoot vertical shots (portrait)
- Start at one corner and continue all the way around the room

Take shots of the ceiling as well, and extras of any complex areas such as alcoves and curved walls. Too many photos is better than too few.

This reveals the surfaces we are dealing with, and together with the dimensions is enough to understand how sound is interacting in your room.

3 Contact

Email floor plan & photos to apocalypse@asia.com or info@apocalypseindia.com

Please include the following details:

- Name
- Phone
- Street Address
- City, State, Zip
- Mobile Number
- Email and Landline Number

Call Us

We prefer to receive your materials before you call so we can reference when discussing your project.

The Final Process: Understanding the Keywords (About Us)

The consultation and diagnostics of problems with audio, noise, reverberation and vibrations are from important meaning and are for identification and prescription of effective solution.

The engineering consultancy for audio visual, sound insulation, noise abatement and acoustics which we offer are:

Consultation with audio or acoustic engineer on site. The purpose of this consultation is to receive information about the location of the building, the type of the construction, the specifications of the premises, the behavior of sound, the sound sources or the acoustic defects. When the collected information is accurate, the solutions which the client gets are professional and adequate for the specific problem. The consultations with visit are by appointment on the shown contacts and are paid. The consultancy includes written prescription and software calculations of the achievable results together with quantitative value calculations for the necessary materials and work.

Consultancy with acoustic engineer in our office. Similar to the onsite consultancy they serve for providing the necessary information needed for prescribing the decision. For conducting of such information is necessary the client has to provide drawings and images of the problematic zones and buildings. The prior enrollment of this consultation is obligatory. The consultancies are charged on per hourly base.

Individual consultancy via Skype or Viber or Video call. The online consulting is suitable form of establishing of contacts and taking actions for solving the problem regarding audio visual solution, sound insulation, noise abatement, acoustics and vibration. For conducting of such consultancy it is necessary to provide drawings which have to be sent in order to be examined during the conversation, also some clear images and that give possibility to clarify in detail what is character of the problem that you have established. The online consulting on Skype or Viber or Video Call with audio or acoustic engineer is pre paid and is prior agreed in accordance to the possibilities for conducting the session. For appointing online consultancy please contact us at: Tel: +91-40-66621266 or apocalypse@consultant.com

The engineers of **APOCALYPSE ACOUSTIC SCIENCES CORP** have different experience and specialization. That is why the prices of the consultations with junior and senior engineers have different prices. For more information please contact us at:

Telephone: +91-40-66621266, +91-40-64561266 or info@apocalypseindia.com
